

Backend Directory Structure

The `server` directory is highly organized to promote scalability.

File Tree

```
server/
├─ config/
│   └─ db.js          # Database connection logic
├─ controllers/
│   ├── authController.js # Registration, Login
│   ├── rideController.js # Booking, Completing rides
│   └─ driverController.js # Location updates, stats
├─ middleware/
│   ├── auth.js         # JWT verification and RBAC
│   └─ errorHandler.js  # Global error catching
├─ models/
│   ├── User.js         # Mongoose Schemas
│   ├── Ride.js
│   └─ Driver.js
├─ routes/
│   ├── authRoutes.js   # Express Routers
│   ├── rideRoutes.js
│   └─ driverRoutes.js
├─ socket/
│   └─ socketHandler.js # WebSocket event listeners
├─ utils/
│   ├── generateToken.js # JWT generation
│   └─ fareCalculator.js # Distance/Time pricing math
├─ .env                # Secrets (Not committed to Git)
└─ server.js           # Application entry point
```
