

Execution & Deployment

How to run the Ucab application locally.

Prerequisites

- Node.js (v18+)
- MongoDB (Local or Atlas URI)

1. Backend Server

Open a terminal in the `server` directory:

```
npm install  
npm run dev
```

The server will start on <http://localhost:5000>

2. Frontend Client

Open a new terminal in the `client` directory:

```
npm install  
npm run dev
```

The React app will start on <http://localhost:5173>

3. Database Seeding (Optional)

To populate the database with test users and drivers:

```
cd server  
npm run seed
```
