

Core Features

1. Real-Time Tracking

Integration with Leaflet maps and Socket.IO allows both users and drivers to see each other's live positions on an interactive map.

2. Secure OTP Verification

To ensure passenger safety and prevent unauthorized ride starts, a 4-digit OTP is generated upon booking and must be verified by the driver.

3. Dynamic Fare Calculation

Calculates price based on Haversine distance formulas, vehicle type base rates, and time estimates.

4. Modern Glassmorphism UI

A premium dark-themed interface built with custom CSS variables, translucent panels, and responsive grid layouts.

5. Role-Based Dashboards

Completely separate UI experiences and navigation menus depending on whether the logged-in user is a Passenger or a Driver.
